

**PROSSKIN Ki**  
Art.: 500032

Usage:

For creating bald caps, artificial skin, scars and burns.

Can also be used for building-up skin in negative moulds. (Mould must be pre-rinsed with **PROSTREN Ki**).

Characteristics: A water based, solvent-free skin building agent.

Safety precautions:

Do not bring in contact with eyes or the insides of mouth, nose or ears. Do not swallow.

May not be applied to hair in liquid form. It is not necessary to use an extractor fan while working with **PROSSKIN Ki**.

N.B. Alcohol and solvent will make this product disintegrate.

Procedure:

Can be applied by brushing, stippling or with an airbrush gun. Can be thinned with water. Colouring with Aquacolour wet-make-up.

Appliances made from **PROSSKIN Ki** can be glued with **SPECIAL ADHESIVE KI**.  
Protect finished appliances from extreme heat.

Tips and tricks:

Edges of bald caps can be thinned or dissolved with a cotton bud, dipped in ISO or alcohol. **PROSSKIN Ki** may be dabbed directly onto the skin (when trimming the edges).

N.B. Please use **PROSTREN Ki** on all heads or appliances made with **PROSSKIN Ki** before re-using.

Depending on the thickness of the material used, we recommend 4 to 7 layers. Each layer must be blow-dried. Dust with powder and remove from ceramic head as usual.

Cleansing:

Clean tools with hot water – dried remains should be treated beforehand with ISO or spirit/alcohol.

The best product for cleaning remains of glue from the skin (or for removing bald caps) is our adhesive remover **PROSSAR Ki**.
